## Work Experience

---

### Cloud DevOps Engineer

*Biztransights Solutions LLP*

*Nagpur, MH*

*Feb 2026 – Present*

- Designed and deployed secure cloud infrastructure on Microsoft Azure and AWS for healthcare applications using Infrastructure as Code (Terraform), following enterprise architecture and security best practices.
- Architected secure development environments by provisioning isolated developer VMs, Azure App Services, Azure SQL Database, Azure Web Application Firewall (WAF), Virtual Networks, and Microsoft Entra ID for centralized authentication and access control.
- Implemented cloud solutions aligned with healthcare security and compliance standards including HIPAA, PHI protection, secure identity management, encryption, network segmentation, and least-privilege access.
- Developed and maintained Azure DevOps CI/CD pipelines for automated infrastructure provisioning and application deployment across development and production environments.
- Enabled organization-wide adoption of Azure AI Foundry by configuring enterprise AI model access for developers through Visual Studio Code, streamlining secure AI-assisted software development workflows.
- Managed enterprise cloud security by provisioning SSL/TLS certificates, configuring Cloudflare security and routing rules, implementing secure DNS practices, and strengthening application perimeter security.
- Integrated DevSecOps practices by deploying and managing SonarQube and Snyk for continuous Static Application Security Testing (SAST), Software Composition Analysis (SCA), vulnerability management, and secure software delivery.

### DevOps Engineer

*Kyliant Software Solutions Pvt Ltd*

*Indore, MP*

*Jan 2025 – Feb 2026*

- Deployed and managed Node.js, Java, and Python applications across multiple environments using Docker and multi-stage builds, improving portability and reducing image size by 35%.
- Implemented and maintained end-to-end CI/CD pipelines using Jenkins and GitLab CI, automating testing, image builds, and deployments to AWS ECS, achieving a 20% reduction in release cycle time.
- Configured and optimized NGINX as a reverse proxy and load balancer with Let's Encrypt SSL, ensuring secure and efficient traffic management for multi-tier architectures.
- Managed and monitored AWS infrastructure including EC2, ECS, RDS, VPC, Route 53, SNS, SES, and CloudWatch for scalable, fault-tolerant, and event-driven applications.
- Automated cloud infrastructure provisioning using Terraform, enabling reproducible environments and Infrastructure as Code (IaC) compliance.
- Hands-on experience operating core AWS services such as EC2, Lambda, ECS, VPC, RDS, Route 53, ELB/ALB, IAM, and CloudWatch in production-grade environments.
- Administered Linux servers by performing patching, debugging system issues, managing users, automating tasks with bash, and ensuring security baselines.

### Cloud Engineer Intern

*Variant.ai*

*Nagpur, MH*

*Jul 2024 – Jan 2025*

- Assisted in setting up EC2, VPCs, and load balancers for internal applications.
- Designed Auto Scaling policies reducing latency by 25% and ensuring high availability for daily active users.
- Built AWS Lambda functions integrated with Amazon EventBridge to automate the scheduled stopping and starting of EC2 instances, leading to 40% cost savings by reducing idle time for non-peak hours.

## Projects

---

### E-Commerce Microservices with Kubernetes — DevOps Deployment

- Implemented Docker containerization for all microservices with optimized multi-stage Dockerfiles, ensuring consistent application packaging and portability across environments.
- Learned and applied Kubernetes orchestration by writing deployment manifests, services, and configurations to deploy containerized microservices with high availability and automated scaling capabilities.
- Set up CI/CD automation with Jenkins integrated with GitHub for automated testing, Docker image builds, and continuous deployment to Kubernetes cluster with version control.

#### **CI/CD Automation Pipeline — Jenkins, Docker, GitHub, SonarQube, Trivy**

- Built a Jenkins pipeline integrated with GitHub webhooks to auto-trigger builds on code pushes, automate Docker image builds, and deploy the app as containers.
- Integrated SonarQube for static code analysis and enforced quality gates, added Trivy for container vulnerability scanning.
- Implemented versioned Docker image tagging, automatic cleanup of old images, and safe container deployment on each push.
- Jenkins configured to send build status alerts and used secure GitHub credentials to clone private repositories for build automation.

#### **Education**

---

**S B Jain Institute of Technology Management and Research – Nagpur**

*Bachelor of Technology in Computer Science and Engineering*

*Feb 2020 – Jun 2024*

#### **Technical Skills**

---

- **Cloud Platform:** AWS (Amazon Web Services), Microsoft Azure
- **DevOps:** Linux Administration, Jenkins, Docker, Kubernetes, GitLab CI, Terraform, Git, Ansible, Azure DevOps
- **Networking:** IP Addressing & Subnetting, TCP/UDP, DHCP, SFTP, SMTP, NGINX, SSL/TLS
- **Programming & Scripting:** Bash Scripting
- **Monitoring & Logging:** AWS CloudWatch, Prometheus, Grafana, Azure Monitor, Sentinel, Datadog, Cloudflare
- **Security & Compliance:** IAM User Access Management, Microsoft Entra ID, Security Auditing (SonarQube, Snyk)
- **Other Skills:** Documentation (Runbooks, SRS, SOPs), Troubleshooting, Problem-solving, Multi-tasking

#### **Certifications & Achievements**

---

- FinOps Certified Engineer — Linux Foundation
- Microsoft Azure Administrator — Microsoft
- AWS Solutions Architect Associate — ExcelR

#### **Additional Information**

---

- Willing to work in 24/7 rotational shifts
- Proactive attitude toward training and self-improvement
- Strong collaboration skills and ability to follow standard operating procedures
- Excellent written and oral communication in English
- Open to relocation
